This book provides an overview of contemporary postgraduate research in Technology Education, bringing recent research on technology education to the attention of teachers so that they can use the findings to inform their practice, while also informing the education research community about studies being carried out in the field of Technology Education. The book brings together significant international research on Technology Education by focusing on contemporary PhD theses. While the conceptual underpinnings of each research project are explained, the focus is on elaborating the findings in ways that are relevant for practitioners. The book features contributions from doctoral students who completed their research in 2013. Each chapter employs a similar structure, with a focus on what the research means for classroom teachers. The book offers a valuable resource for researchers, teachers and potential researchers, with suggestions for further study. Each chapter also includes references to the digital edition of the respective full thesis, allowing readers to consult the research in detail if necessary.

The Pap test remains among the most effective tests against cancer ever devised, but the handling of it has changed in the last decade. Richard Mac DeMay's text reflects those changes, stepping out of his previous two-volume general text to add greater practitioner depth and incorporating: Hundreds of liquid-based preparations alongside conventional smears Molecular biology and images of proven HPV, status cases The latest twists of Bethesda System Nomenclature, correlated to previous systems More than 4,000 references from the international literature The Pap Test is delivered in the author's clear and entertaining style. You will not only want to turn to this reference daily, but you will also come away with new and completely practical insights every time.

This book is a practical guide to the evidence-based medicine (EBM) research methods that are applicable to Chinese medicine (CM). It includes 3 parts: clinical research, healthcare data research and laboratory research. In each chapter, it explains how to acquire, analyze and evaluate a specific kind of CM research result. Authors exemplify the most important methods with successful cases in transforming reliable data into new knowledge of CM. This book emphasizes the requirements for CM researchers to design and conduct CM studies by following the best available principles, standards and guidelines.

Technical and vocational education and training at technical schools are major contributing factors in combating poverty, unemployment, and inequality. The primary purpose of technical and vocational education and training is to prepare students and learners for the world of work and for a smooth transition from education institutions into the workplace. As the Fourth Industrial Revolution continues to create more radical changes in the labor market, experts are calling for a reform of education, including vocational education and training and adult and professional education. New Models for Technical and Vocational Education and Training is an essential scholarly research book that examines TVET and CET colleges and programs that provide intermediate skills to enhance students' chances of employability and entrepreneurship in Industry 4.0. The book explores knowledge in respect to workforce preparation, digital skills development, teaching and learning of TVET, flexibility and articulation of TVET to respond to work-integrated learning, and reskilling and upskilling to avoid skill mismatches. It is ideal for TVET schools, academicians, curriculum designers, managers, training officers, administrators, vocational professionals, researchers, and students.
