The Lesson of the Kaibab. Shannan Muskopf May 6, 2018. At the beginning of the 20th century, the Kaibab Plateau was witness to an interesting experiment in what some might call population engineering. The plateau's pre-1905 population of deer was estimated to be around 4,000. The average carrying capacity of the land was unknown, in part because this concept was not widely used by naturalists at the time.
