Equilibrium - Stable , Unstable , Neutral | **Physics Equilibrium Answers**

(a) State the two requirements for a body to be in total equilibrium. [2]

Solution: Zero net moment and zero resultant force.

(b) From rest, the wheel requires a torque of 20000 Nm to overcome the static friction. What must be [2] the minimum radius of the circle traced out by Marguerite and Daisy in order for them to be able to grind the corn?

the key word that is used to describe equilibrium situations. Thus, the net force is zero and the acceleration is 0 m/s/s . Objects at equilibrium must have an acceleration of 0 m/s/s . This extends from Newton's first law of motion. But having an acceleration of 0 m/s/s does not mean the object is at rest.

Equilibrium, in physics, the condition of a system when neither its state of motion nor its internal energy state tends to change with time. A simple mechanical body is said to be in equilibrium if it experiences neither linear acceleration nor angular acceleration; unless it is disturbed by an outside force, it will continue in that condition indefinitely.

Equation 12.3.6 and Equation 12.3.7 are two equations of the first equilibrium condition (for forces).

Next, we read from the free-body diagram that the net torque along the axis of rotation is $\sum \tau = 0$. Equation 12.3.8 is the second equilibrium condition (for torques) for the forearm.

Equilibrium, Forces, and Inertia | Physics Quiz - Quizizz

A body is in equilibrium if it is in motion generally, the base of the object should lie in lowest position so that the object

Read Online Physics Equilibrium Answers

becomes more stable.

Similarly, the area of base should also be large. Also, the vertical line passing through C.G should lie on the large area of base.

Under such three conditions, the body becomes equilibrium.
